Eye Check from Volk Optical is an electronic handheld device that helps practitioners screen and document ocular characteristics for contact lens fitting and general diagnostic purposes. It performs a number of key measurements, including pupil diameter, horizontal visible iris diameter, interpupillary distance, margin reflex distance, pupil eccentricity and strabismus angle. The real-time, objective results enable quick decision-making, such as identifying patients who are candidates for specialty contact lenses thereby reducing drop-out rates. Results can be output to electronic records management systems with WiFi connectivity.
