Single-Use Prisms for Tonometry

Keeler Instruments has introduced Tonomate, a new disposable prism for Goldmann applanation tonometry, to help reduce cross-infection and streamline the eye examination. Each single-use Tonomate prism comes in its own sterile packaging and can be fitted easily without requiring direct contact.

The prisms are ideal for use with D-KAT, Keeler's digital applanation tonometer. D-KAT is available in R-type and T-type variants for H-style slit lamps and as a Z-type model for Z-style slit lamps.
