

Topcon has unveiled its new, fully automatic TRC-NW400 Non-Mydriatic Retinal Camera. Using the TRC-NW400, operators do not need to spend time aligning, centering, focusing or capturing color retinal images because the unit automatically performs these steps once the camera is positioned in front of the eye. It also automatically travels from one eye to the other when both eyes are being imaged. The instrument can be operated from any angle because it incorporates a rotating touch panel monitor. The TRC-NW400 can also take photographs of the anterior segment. Fully DICOM-compliant, it can be connected to a digital capture system or used as a stand-alone instrument.
